

# Ruby on Rails & AngularJS Internship

at Monday

# About Monday

**Monday is a web platform that professionals can use to receive alerts about their dream jobs.**

With Monday, users do not need to create a profile to get value from the system (unlike in LinkedIn), all they need to do is to ask a question (Quora style) requesting a list of companies they would love to work for.

For example: “What are the top companies in the industry of Education in NYC that are hiring Engineers?”. Then, Monday will send them job alerts without any other action required from the professional.

Monday is able to do this because it is constantly indexing jobs (like Google, but focused on jobs). In this way, Monday knows when each company is hiring before anybody else. In order to select the top companies in the industry of Education in NYC, Monday asks this question to a community of experts that contribute because they love adding value to others and also to Monday’s full time research team, who are always working to filter and categorize the best companies around the world.

# Working at Monday

Monday is a young startup born in May 2016. Founded by [Evan Walden](#) and [Raul San Narciso](#), two energetic entrepreneurs that have previously worked together and built [ReWork](#), a profitable company that more than 40,000 professionals have joined and trusted.

We've built an amazing team of advisors with experience at places like Indeed, Rally Software, McKinsey, Wikimedia Foundation, and Google [X] who are passionate about the problem we are solving and will advise you too as part of the company.

We love Mondays and we want that you love them too. For that reason we are building a strong company culture where team members feel excited to start work every week. This is how we work:

- Team members can work remotely anywhere in the world always that they take responsibility for their productivity. This is especially true for the most technical roles where execution and focus are key.
- To be part of the strategy team you will have to understand the culture of the market (currently the US) and work in-person with decision makers within the company.
- We are action oriented and have tendency to be pragmatic in how we execute and how we communicate. Shipping fast is more important than overthinking. Being practical and building things is more important than being dreamers.
- Diversity is a core element of our culture and because of that, we believe that your differences are our strength. You will work within a culture rich in points of view and ways of approaching life & work that will help you be more open minded and tolerant of differences.
- We help professionals get matched to organizations in a way that in their new job, they sense a stronger sense of purpose and greater motivation in their lives. At Monday, your own sense of purpose and motivation is highly appreciated and cherished because through your own purpose you will help other professionals do the same.

# About the Role -- Ruby on Rails & AngularJS Internship

At Monday we believe the best way to learn is to create real solutions to real problems and that is why you will collaborate creating systems that will serve thousands of users in the real world. You will do this along a team of self-driven professionals like yourself.

As a Ruby on Rails & AngularJS Intern at Monday, you will enable top professionals get alerted about their dream jobs.

To achieve this purpose, you will have the opportunity to participate in the design of solutions to new technological challenges. You will learn to use new technologies while you establish yourself as a strong professional able to create a strong positive impact in small and big companies alike.

# Your Key Responsibilities

Collaborate in the design and architecture of the web platform at Monday using the following technologies:

- Ruby on Rails
- AngularJS
- Coffeescript / Javascript
- HTML / JADE
- CSS / SASS
- Develop the necessary tests to build a robust & scalable software.

To use systems to collaborative in the software development process like:

- Github
- Pivotal Tracker
- Asana
- Heroku

# We're looking for:

- A self-driven individual who loves problem-solving. You enjoy the challenge of answering questions by yourself.
- Someone eager to be part of an international team.
- Someone who is open minded and thrives collaborating with a diverse team of individuals.
- Someone curious by nature who looks for answers with enthusiasm.
- Someone who is practical and would rather show than tell.
- Someone with a strong sense of responsibility over its own learning experience.
- Someone with a strong sense of responsibility over its own productivity.
- A professional with 0-3 years of experience who has previously used web technologies.

## **This role is great for your career if...**

- You're looking to join a growing startup where your opinions matter and your actions can make a valuable difference.
- You learn by doing and are you are eager to learn.
- You're looking to work in an ambitious environment as part of a top-performing team with a diversity of skill sets.

# Where will you work?

For this position you will be able to choose where to work. We give you two options so that you can select that it is more convenient for you:

## **Work at Madrid Google Campus**

Google is building a network of campuses and Madrid has the privilege to have one of them.

The campus is situated at Calle Moreno Nieto, 2 Madrid, 28005. It is an opportunity to be surrounded by a community of doers and be influenced by their work.

## **Work Remotely**

We understand that in your work focus is key. That is why you can choose to work from the place that gives you more focus, whether it is by the beach or within the University. It is up to you. All we ask you is that you become a master and owner of your productivity, able to get things done while you learn.

# What happens if you're selected?

You'll be invited to join our growing team from the location you choose. Depending on your your learning style and your level of experience using Rails & AngularJS, we will help you find the best methodology for you to learn the new technologies while you will also start building real things.

# Compensation

€550/month for 20 hours a week of your time.
