

## 6 months placement from Feb/Apr 2014

### Opportunity to contribute to an ambitious European software startup

London, 28<sup>th</sup> Oct 2013

#### About me

My name is Eric. I am 45 years old. I graduated from a French Engineering school (computing) and a UK University (Artificial Intelligence) 20 years ago. I have been living in London since 2000.

When I was 26 years old, I co-created my first software company in Paris. Today, I am the co-owner and CTO/COO of another software company which I launched in 2002 in London. We started with 4 employees. We are now 200 and still growing. We have subsidiaries in 11 countries. We create and sell software to very large companies across the globe. We have clients from China to the US. We do over 20MEuro of turnover, and have acquired 7 companies in the last 7 years. We are listed on Nyse:Euronext.

But this is not an advert to recruit for this company.

#### About the project

Instead, I am launching a new project right now.

I believe it is the most ambitious I have made so far, and I will pilot it to be way bigger than the previous ones.

As a consequence, **I am now building a team of extremely talented, and extremely motivated young software developers, coming from several European countries.** The team will initially operate on a virtual basis. By end 2014 or very early 2015, it is likely that most of the team members will have to be based in London.

The project is a cloud enabled application mostly accessed via mobile apps, and making use of geolocation. It aims at revolutionizing local services and payments of such services. The ambition is to quickly get several millions of subscribers.

If you would like to take part at the start of this ambitious project, please send your CV to [jobs@helptim.com](mailto:jobs@helptim.com)

#### About you

Must have:

- You are ready to work hard and be at the start of a new but ambitious project
- You think your programming skills are way above most guys you meet
- You already have a strong experience in software development, proven by many completed projects
- You enjoy being part of a multilingual and multicultural environment
- You can speak and understand English fluently

Good to have:

You are very strong in at least one of the below categories

- Back end server side coding (PHP, C#, SQL)
- Browser client side (Javascript, CSS, HTML)
- Mobile / Tablet (Objective C, C++, Java)

You understand Service Oriented Architectures and Agile Programming concepts

You have past experiences in large scale Web Application development

You like to challenge yourself and others

Nice to have:

You can speak several languages
