

6 months placement from Feb/Apr 2014

Opportunity to contribute to an ambitious European software startup

London, 28th Oct 2013

Project A: mobile app development

Project

You will be part of the mobile development team, and contribute to the development of the mobile front end to our web services. The app runs natively on iPhone and Android (two versions of the same functionality).

Required skills

- SOAP 1.2 and XML
- Java and / or Objective C
- Agile and scrum development practises

Project B: mobile app development

Project

You will be part of the back-end development team, and take full ownership of one or several back-end applications we are developing in our global offering. You are likely to work on our eBooking app service, but this sub-project may be replaced by another one of similar complexity and value when your placement starts, as we progress at a fast pace, and attribute projects based on both our roadmap and the best capabilities of our team members.

Required skills

- SOAP 1.2
- PHP and / or C# .NET
- Design patterns and Service Oriented Architecture knowledge
- Agile and scrum development practises

Common conditions

Placement conditions

We prefer you to be located in London for the duration of the placement, but we are flexible as the team currently operates partly virtually and remotely.

Compensation to be discussed depending on location and experience.

6 months placement minimum, starting February 2014, or later.

European nationality or Visa required

We intend to recruit you (in London) at the end of your placement if satisfactory.
